7. An Li-ion storage cell comprising at least one ester as defined in any one of claims 1 to 3.
8. An Li-ion storage cell comprising a composition as claimed in claim 5 or 6.
9. A composition as claimed in claim 5 or 6 for use as an electrolyte system in Li-ion storage cells.
10. A process for preparing an ester of formula (I) to (V), as defined in claim 1, characterized in that a chloride is employed as a starting material and a trialkyl amine is used as a scavenger for HCl formed during the preparation of the ester.
